PROFESSIONAL SUMMARY

Computer Science Engineering student (CGPA 9.06/10) and Software Engineer Intern focused on back-end development and REST API design. Built the backend for Amplyt, an EV charging trip planner, with FastAPI, SQLAlchemy, JWT authentication and Docker. Uses Claude Code for AI-assisted rapid development, applied to both the Bynaptic Connections client website and the Amplyt major project. Proficient in Java, Python, C/C++ and JavaScript, with strong fundamentals in data structures, algorithms, OOP and DBMS.

EDUCATION

Bachelor of Engineering, Computer Science & Engineering **2022 – Present**
K S Institute of Technology (Autonomous under VTU), Bengaluru | CGPA: 9.06/10 (up to 6th semester)

- **Relevant Coursework:** Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Pre-University (PUC) — Narayana PU College (Karnataka State Board) | Percentage: 91.83% **2020 – 2022**

EXPERIENCE

Software Engineer Intern | Stalight Technologies Pvt Ltd | Bengaluru (Hybrid) **Oct 2026 – Present**

- Working on back-end web development as part of the engineering team in a hybrid internship.

Freelance Web Developer | Bynaptic Connections | Client Project **Present**

- Developing the company website for Bynaptic Connections as an independent freelance engagement.
- Collaborating directly with the client on requirements, development and implementation of the in-progress web solution.
- Using Claude Code for AI-assisted development to speed up building and iterating on the site.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, JavaScript
Backend & APIs: FastAPI, REST APIs, SQLAlchemy, Alembic, JWT Authentication, Swagger/OpenAPI
AI-Assisted Development: Claude Code (rapid prototyping, development and debugging)
Tools & Platforms: Git, GitHub, Docker, Docker Compose, Linux/Command Line, pytest, VS Code, Eclipse IDE
Core Concepts: DSA, OOP, DBMS, Operating Systems, Computer Networks, Problem Solving

PROJECTS

Amplyt — EV Charging Trip Planner | Python, FastAPI, SQLAlchemy, Docker **College Major Project**

- Built the backend for a trip planner for highway EV drivers that routes a journey (e.g., Bengaluru → Mysuru), finds reachable, compatible chargers along the route and ranks stops by expected wait, detour and charging speed.
- Developed a layered FastAPI backend (routers, services, repositories) with SQLAlchemy ORM, Alembic database migrations and JWT-based authentication, documented through Swagger/OpenAPI.
- Integrated a self-hosted OSRM routing engine and containerised the services with Docker Compose; used Claude Code for AI-assisted rapid development, with pytest tests covering the backend.
